J. Mol. Biol. 232:268-284(1993).
-I. FUNCTION: FACTOR H FUNCTIONS AS A COFACTOR IN THE INACTIVATION C3B BY FACTOR I AND ALSO INCREASES THE RATE OF DISSOCIATION OF C3BBB COMPLEX (C3 CONVERTASE) AND THE (C3B) NBB COMPLEX (C5 CONVERTASE) IN THE ALIENNATIVE COMPLEMENT PATHWAY.
-I. SIMILARITY: CONTAINS 20 SUSHI (SCR) REPEATS.
-I. CAUTION: REF.2 SEQUENCE DIFFERS FROM THAT SHOWN FROM POSITION 341 ONWARD DUE TO A FRAMESHIFT.

-i- FUNCTION: C4BP CONTROLS THE CLASSICAL PATHWAY OF COMPLEMENT ACTIVATION. IT BINDS AS A COFACTOR TO C3B/C4B INACTIVATOR (C3BINA), WHICH THEN HYDROLYZES THE COMPLEMENT FRAGMENT C4B. IT ALSO ACCELERATES THE DEGRADATION OF THE C4BC2A COMPLEX (C3 CONVERPASE) BY DISSOCIATING THE COMPLEMENT FRAGMENT C2A. ALPHA CHAIN BINDS C4B. IT INTERACTS ALSO WITH ANTICOAGULANT PROTEIN S AND WITH SERUM AMYLOID P COMPONENT.

-i- SUBUNIT: DISULFIDE-LINKED COMPLEX OF C4BP ALPHA AND BETA CHAINS OF 3 POSSIBLE SORTS: A 570 KDA COMPLEX OF 7 ALPHA CHAINS AND 1 BETA CHAIN, A 530 KDA HOMOHEDTAMER OF ALPHA CHAINS OR A 500 KDA BETA CHAIN, A 530 KDA HOMOHEDTAMER OF ALPHA CHAINS OR A 500 KDA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   "Visualization of human C4b-binding protein and its complexes with vitamin K-dependent protein S and complement protein C4b."; Proc. J. Immunol. 153:4190-4199(1994).

J. Immunol. 153:4190-4199(1994).

FUNCTION: C4BP CONVERDLY THE CLASSICAL PATHWAY OF COMPLEMENT ACTIVATION. IT BINDS AS A COFACTOR TO C3B/C4B INACTIVATOR (C3BINA), WHICH THEN HYDROLYZES THE COMPLEMENT FRAGMENT C4B. IT ALSO ACCELERATES THE DEGRADATION OF THE C4BC2A COMPLEX (C3 ALSO ACCELERATES THE DEGRADATION OF THE C4BC2A COMPLEX (C3 CONVERTASE) BY DISSOCIATING THE COMPLEMENT FRAGMENT C2A. ALPHA CONVERTASE) BY DISSOCIATING THE COMPLEMENT FRAGMENT C2A. ALPHA CONVERTASE) BY DISSOCIATING THE COMPLEMENT BERUM ANYLOID P COMPONENT.

FUNCTION OF C4BP ALPHA AND BETA CHAINS (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Eukaryota;

TIMUCTION: C4BP CONTROLS THE CLASSICAL PATHWAY OF COMPLEMENT ACTIVATION. IT BINDS AS A COFACTOR TO C3B/C4B INACTIVATOR (C3BINA), WHICH THEN HYDROLYZES THE COMPLEMENT FRAGMENT C4B. I ALSO ACCELERATES THE DEGRADATION OF THE C48C2A COMPLEX (C3 ALSO ACCELERATES THE DEGRADATION OF THE C48C2A COMPLEX (C3 CONVERTASE) BY DISSOCIATING THE COMPLEMENT FRAGMENT C2A. ALPHA CHAIN BINDS C4B. IT INTERACTS ALSO WITH ANTICOAGULANT PROTEIN AND WITH SERRIM ANYLOID P COMPONENT.

BIOChemistry 26:4668-4674(1987).
-!- FUNCTION: C48P CONTROLS THE CLASSICAL PATHWAY OF COMPLEMENT ACTIVATION. IT BINUS AS A COFACTOR TO C3B/C4B INACTIVATOR (C3BINA), WHICH THEN HYDROLYZES THE COMPLEMENT FRAGMENT C4B. IT ALSO ACCELERATES THE DEGRADATION OF THE C4BC2A COMPLEX (C3 CONVERTASE) BY DISSOCIATING THE COMPLEMENT FRAGMENT C2A. ALPHA CHAIN BINUS C4B. IT INTERACTS ALSO WITH SERUM AMYLOID P COMPONENT.
-!- SUBUNIT: HOMOHEPTAMER; NOT COVALENTLY LINKED. MOUSE LACKS THE BETA CHAIN OF C4BP.
-!- SIMILARITY: TO C4BP BETA CHAIN AND TO PIG APOLIPOPROTEIN R.
-!- SIMILARITY: CONTAINS 6 SUSHI (SCR) REPEATS.

1- FUNCTION: RECEPTOR FOR COMPLEMENT C3D AND FOR THE EPSTEIN-BARR VIRUS ON HUMAN B-CELLS. PARTICIPATES IN B LYMPHOCYTES ACTIVATIC ...

1- TISSUE SPECIFICITY: MATURE B LYMPHOCYTES AND FOLLICULAR DENDRIFIC CELLS OF THE SPLEEN.

1- SIMILARITY: TO MOUSE CR2. CD21 IS A MEMBER OF THE REGULATORS OF COMPLEMENT ACTIVATION (RCA) FAMILY.

1- SIMILARITY: CONTAINS 15 SUSHI (SCR) REPEATS.

SUBUNIT: TETRAMER OF TWO A CHAINS AND TWO B CHAINS.
DISEASE: A DEFICIENCY IN FA13 CAN RESULT IN A LIFELONG BL
TENDENCY, DEFECTIVE WOUND HEALING, AND HABITUAL ABORTION.
SIMILARITY: CONTAINS 10 SUSHI (SCR) REPEATS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         FUNCTION: THE B CHAIN OF FACTOR XIII IS NOT CAT
BUT IS THOUGHT TO STABILIZE THE A SUBUNITS AND
OF TRANSGLUTAMINASE FORMATION BY THROMBIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SWISS-PROT entry is copyright.
